

**The year is 1969 and your light switch probably looked like this...**

**... in the future, your lightswitch will think for itself**

**Meet the future. IntelliSwitch™**

***What a bright idea!***

# Don't forget to turn off the lights, let IntelliSwitch™ do it for you!

**It's the switch that thinks for itself, so you'll never forget to turn off appliances or lights again.**

IntelliSwitch™ replaces your existing switches and power sockets so you can turn off different power consumers in your home without having to be there. Turn your hall lights off without getting out of bed, and have heated towel rails turn off automatically while you're at work!

You choose the default times, you might choose 15 minutes for the iron plug, or your child's reading light, or 90 mins for the heated towel rail. The IntelliSwitch™ operates as a normal on/off switch if you need it to — except that it looks a whole lot better than the previous generation of switches.

IntelliSwitch™ comes in 5 different models (see right), so you can gain more control over your power bills!

**Don't rely on yourself to remember— rely on IntelliSwitch.**

## IntelliSwitch™ Applications

**Hall light switch** — set the switch to 15 minutes and have the light on when you need it, or for extra vision and safety when climbing into bed

**Heated towel rail** — choose your default time for daily towel drying, or go for the automated cycle of 4 hours on and 8 hours off. See big money savings on your power bill, as the heated towel rail is a real energy gobble

**Bathroom fan** — leave it on just long enough to clear the air

**Heater socket** — heaters no longer need to be left on unnecessarily overnight or while you're at work, set them to turn off automatically with the IntelliSwitch™. Safer and more energy efficient.

**Outside entrance lights** — expecting someone home late? Don't wake up in the morning to find the light has been on all night.

**Office light switch** — workaholics beware! Time manage yourself with a light that switches off.

**Battery charger socket** — don't over charge your drill batteries, let the IntelliSwitch™ timer take care of the recharging.

**Childrens bedroom** — no more arguments about how long they read for, plus the gentle glow in the dark panel helps them find the switch at night.

## 5 models of IntelliSwitch™ are available

List prices include GST

**Single Switch**  
model IS-SS  
**\$79.95**

**Double Switch**  
model IS-DS  
**\$109.95**
